Founder, DNS Park

# Simple Tools Managing Complex Technologies

## BE IN CONTROL

Your domain belongs to you, and you control it. Your web site was developed with you in mind, and you control it. If you forget about your DNS, you've lost control.

Two words sum up the importance of DNS – mission critical. The more reliable your DNS is, the more likely your web site is going to be available. At DNS Park we understand the criticality of it and focus our efforts on this single unattractive function.

Easing the burden of systems management will enable you to be more productive while knowing your DNS is handled properly. Our secure web based system allows you to maintain complete control over your domain and your web site without sacrificing anything.

## LEVERAGE OUR KNOWLEDGE

Ensuring your DNS is handled properly is what we do better than anyone. We have leveraged our experience gained through years of operating corporate servers and networks to create a fault tolerant system that has been designed to be highly secure and easy to use.

Security is always at the forefront of our processes so you can be assured that your information is being well kept. We made a choice to use BIND as our standard platform because it is the standard, and we accept the management and security of the name servers so you don't have to.

Our systems employ stronger authentication constraints than are common as part of our commitment to security and privacy. Using IP based access control lists (ACLs) and password techniques; we can prevent password guessing and unauthorized access.

## THE DNS ANSWER

Reduce your DNS failures. Reduce the time spent managing your DNS. And reduce your costs by choosing the DNS Park managed DNS solution. We will bear the burden of ensuring your DNS is always available and we provide a 100% uptime guarantee to prove our commitment.

Our user interface is secure, easy to use and provides complete control over your domain. We support all the major DNS record types and many that are not commonly used. Our reporting capabilities let you know what is happening to your domain and how much it is being queried.

Our account security features are unmatched in the industry combining multiple technologies to secure your data. You are in complete control of your data from the time it enters our system to how it is distributed to other name servers on the Internet.

With the continuing Internet threats, let us manage the DNS risks and handle your DNS information securely and reliably while you concentrate on your business.

## Key Benefits

**Reduces costs.** By using DNS Park to outsource domain name services, companies can eliminate the burden of ongoing DNS maintenance.

**Ease of use.** The DNS Park Control Center has been carefully designed to provide maximum functionality, while maintaining ease of use. Simplified systems management allows you to spend less time on DNS problems and more time on business issues.

**Reliability.** Domain name services must always be available. DNS Park has carefully built its mix of name servers, backbone providers, and facilities, to provide a fail proof, 100% reliable solution to meet the critical needs of DNS.

**Supports Rapid Growth.** As company's needs grow, DNS Park allows for easy expansion of current services reducing technology costs.

**Robust Security.** Potential threats to systems are monitored through the use of firewalls and intrusion detection systems. All accounts are resistant to brute force password attacks.

Our standard managed DNS hosting services include the following features:

Quick domain activation	Upon adding a new domain to our system, all paid services will be available on our name servers within minutes.
Immediate DNS updates	Any changes made to your records are immediately reflected on our nameservers.
Strong account protections	Utilizing two techniques, we can prevent automated password attacks on your account, and prevent people from logging in your account from unauthorized locations.
HTTPS/SSL Protection	We encrypt all your data between you and our systems and again when we transfer data between our systems.
Support for all global TLDs	We support all global TLDs such as .com, .net, all country codes, .biz, .info, etc.
Round-robin support	We support round robin entries to enable you to balance your connections between multiple systems.
Wildcard support	We support wildcard records so your domain will always answer regardless of name.
Comprehensive logging	Complete logs of changes made in the system are recorded for your historical information
Complete solution for multiple domains	Using DNS Park, all of your domains can be managed from the same interface so updates and changes are easier.
Security and reliability	All customer data is stored behind firewalls. Customer data and name servers all have redundant high capacity Internet connections.

### Additional Services:

DNS Rescue	Guarantee yourself 100% uptime by adding additional name servers to your domain.
Mail PathFinder	If Spam and Viruses plague your mail, let us filter and disinfect your mail before it reaches you.
Mail Rescue	Never lose a mail message if your mail server is unavailable with our backup mail services.
Mail Guiding	Handling e-mail is not a problem. We can forward e-mail for your domain to any email account.
Mail Crossing	Avoid IP address black lists and send outbound mail through us safely and effectively.
Web Guiding	At no extra cost we can provide HTTP redirection to your web site on common or non-standard ports.

What our customers are saying.

"I've just registered with DNS Park. I think it is a great site and pretty much exactly what I was looking for."

"I have to say that I am very impressed by what I have seen so far. My DNS problems look like they have been resolved for what I consider to be a very reasonable price. Thanks again for your prompt and courteous response!"

"Thanks for offering such a great service! Haven't had much of a chance to thoroughly play with the advanced features, but so far this seems to be one of the better DNS management tools on the web."
